

# LITHOCHROME®

## Antiquing Release Pro & LITHOTIQUE™ Antiquing Agent

### PRODUCT DESCRIPTIONS:

#### LITHOCHROME® ANTIQUING RELEASE PRO

LITHOCHROME® Antiquing Release Pro is dusted over the surface of freshly colored concrete flatwork before stamping or texturing. The release powder prevents the tool from sticking to the concrete surface during installation and provides a secondary accent of colors.

Tamping the stamping tool embeds the colored release powder in the textured surfaces of the concrete. Upon washing and sealing, the contrast in color between the underlying concrete and the release powder, creates a visually attractive antiqued look on the concrete. The added release color also enhances the depth of texture for a more natural and realistic finish.

The amount of release agent retained on the concrete will vary with job site conditions. The resulting colorations will range between the concrete color and that of the antiquing release powder. The surface must be sealed and maintained to preserve its antiqued appearance over time.

#### LITHOTIQUE™ ANTIQUING AGENT

LITHOTIQUE™ Antiquing Agent is used to add an accent color to unsealed hardened textured concrete and unsealed overlaid textured surfaces.
